### **Claim Amendments**

Please amend the claims as follows:

1. (Currently Amended): In combination a A copy holder and a notebook computer, the copy holder providing a way to display material copy to a user of a the notebook computer, the notebook computer having an outercase, the combination comprising:

an upper horizontal channel affixed to the outercase,  
a lower horizontal channel affixed to the outercase,  
parallel to said upper horizontal channel,  
a first panel slidably disposed between said upper and lower channels for  
movement between a stored position lying against and within the boundary of said  
outercase and a use position outboard of said outercase where said first panel can  
retain and display copy materials to the computer user.

2. (Currently Amended): The combination A-copy holder as in claim 1  
wherein said first panel has a parallel top and bottom edges which cooperate  
slidably with said upper and lower channels, respectively.

3. (Currently Amended): The combination A-copy holder as in claim 2,  
further including rigid linear tubular members affixed to said top and bottom  
edges.

4. (Currently Amended): The combination A-copy holder as in claim 3,  
wherein said tubular members have rectangular cross-sections.

5. (Currently Amended): The combination A-copy holder as in claim 1,  
further comprising a second panel nested on and slidably cooperative with said

first panel, whereby said second panel may be telescoped apart from said first panel to expand the width of said copy holder.

6. (Currently Amended): The combination ~~A-copy holder~~ as in claim 2, further comprising means associated with said first panel for retaining sheets of copy material thereon.

7. (Currently Amended): The combination ~~A-copy holder~~ as in claim 6, wherein said retaining means includes a flap affixed adjacent to the bottom edge of said first panel.

8. (Currently Amended): The combination ~~A-copy holder~~ as in claim 7, wherein said retaining flap includes interior horizontal ridges.

9. (Currently Amended): The combination ~~A-copy holder~~ as in claim 6, wherein said retaining means comprises a plurality of stiff wire members, each having a first end and a second end, with said first end rotatably affixed to said panel adjacent a corner of said panel and said second end adapted to grip sheets of copy material thereon.

10. (Currently Amended): The combination ~~A-copy holder~~ as in claim 6, wherein said retaining means may be rotated to a substantially vertical position to extend the support surface of the copy holder.

11. (Currently Amended): The combination ~~A-copy holder~~ as in claim 3, wherein said tubular members include hinges to allow said panel to rotate about a vertical axis whereby said copy holder may be rotated toward a computer user.

12. (Currently Amended): The combination ~~A copy holder~~ as in claim 1, wherein the copy holder is affixed to the exterior of a lid of a the notebook computer.

13. (Currently Amended): In combination, a copy holder and a notebook computer, the copy holder attached to an outer surface of a lid of the notebook computer, the combination ~~A copy holder for use with and attachment to an outer surface of a notebook computer lid~~ comprising;

a pair of spaced apart slide supports affixed to the outer surface of the computer lid;

at least one panel secured to and between upper and lower support members, said upper and lower support members being slidably retained by said pair of spaced apart slide supports so that the upper and lower supports can be moved relative to said lid to permit said at least one panel to be moved between a nested position within the confines of said ~~cover~~ lid and a use position extended outwardly beyond a side edge of the lid to permit copy material to be held on said at least one panel for viewing.

14. (Currently Amended): A copy holder comprised of a pair of spaced apart slide supports, at least one panel secured to and between upper and lower support members, said upper and lower support members being slidably retained by and within said pair of spaced apart slide supports so that the upper and lower supports, together with the at least one panel, can be moved relative to said pair of slide supports, at least one retainer, positioned adjacent said at least one panel, said at least one retainer provided to overlie and hold sheet material to the copy holder, and means separately attached to each of the pair of slide supports for
